

LinkedIn Job Alert Automation - README

How to Configure the Apify API Token

1. Log in to your Apify account.
2. Go to **Settings** → **API Tokens**.
3. Copy your API token.
4. In n8n, open each HTTP Request node and replace **YOUR_APIFY_TOKEN** with your own token (or use credentials/environment variables).

How to Trigger the Webhook

Method: **POST**

Webhook URL Example:

<http://localhost:5678/webhook/linkedin-jobs>

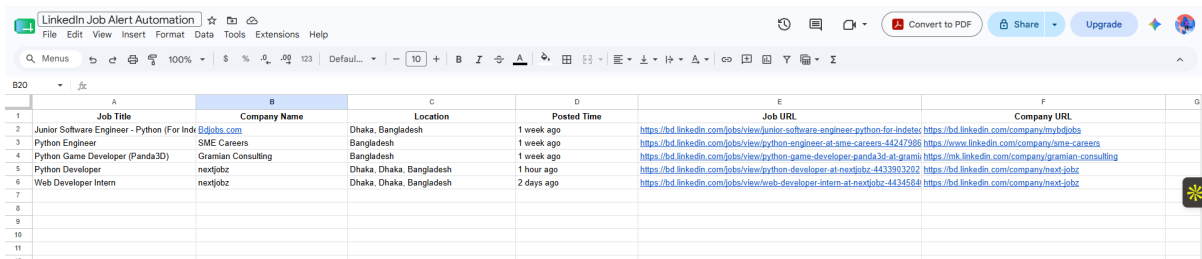

Send a JSON payload to the webhook to start the workflow.

Sample Webhook Payload

```
{
  "jobTitle": "Python Developer",
  "location": "Remote",
  "limit": 20
}
```

Screenshot of the Final Google Sheet

The screenshot below shows the Google Sheet where the workflow stores the scraped LinkedIn job data.

	A	B	C	D	E	F	G
	Job Title	Company Name	Location	Posted Time	Job URL	Company URL	
1	Junior Software Engineer - Python (For Ind	Bdjobs.com	Dhaka, Bangladesh	1 week ago	https://bd.linkedin.com/jobs/view/junior-software-engineer-python-for-indate/	https://bd.linkedin.com/company/mybdjobs	
2	Python Engineer	SME Careers	Bangladesh	1 week ago	https://bd.linkedin.com/jobs/view/python-engineer-at-sme-careers-44247366	https://www.linkedin.com/company/sme-careers
